## **GREAT CHANGES** FOR NEVADA

What the Salt Lake Route is Doing For the State.

WEALTH IN THE DESERT

CLOSE OBSERVER TELLS OF THE COUNTRY AND POSSIBILITIES.

(Special to The Herald.) Moaps, Nev., June 28.-In its transforming influences no railroad ever built has equaled the San Pedro, Los Angeles & Salt Lake in the rapidity of its results. Until within the last two years southern Nevada, so far as the general public was concerned, was a veritable terra incognito. After the completion of the Union Pacific railroad the old trail to southern California was practically abandoned so far as emigration was concerned. A few hardy prospectors and their faithful burros occasionally braved the terrors of these southern Nevada deserts, many of these southern Nevada deserts, many of them paying the supreme penalty fo their daring, which others are doing and will continue to do so long as the

their daring, which others are doing, and will continue to do so long as the dream of gold haunts the minds of men. The building of the San Pedro railroad comes nearer being a public benefaction than any other enterprise ever undertaken in this western land. Men who look only on the surface say that "corporations have no souls," that greed and selfishness are the controlling factors. If those men, who know nothing of social science nor of those corporate forces which are silently solving economic problems and working toward the ultimate betterment of mortals, would only take an overland journey by team and follow the San Pedro from Milford southwesterly over these dreary wastes of sand and gravel, and beneath the blistering sun of this latitude and altitude, and note the beneficent hydrants, thoughtfully provided, where man and beasts can slake their ever-present thirst, those superficial moralists would cease to snarl every time a great corporation is mentioned. There is no doubt that the San Pedro is carrying mearly as many boom-stranded men from these inhospitable deserts back to homes and civilization as those who pay their way. Those men are not ordinary tramps; they are men who staked their last dollar on some boom camp and lost, and are grateful for the privilege of returning in box cars. camp and lost, and are grateful for the privilege of returning in box cars.

Topography of Nevada.

The topography of southern Nevada is as distinctively its own as are the long ranges of mountains that traverse Utah from the Colorado river to Idaho, the distinguishing feature of the Land the distinguishing feature of the Land of Zion. As a rule, the mountain ranges of this country are low and isolated. They rise abruptly from an ancient sea floor, and present a confused maze of rugged elevations. Unlike Lake Bonneville of Utah that, in its slow retreat, laid down the fertile soil of Sevier, Sanpete, Utah, Salt Lake and other valleys, the drying-up of the great Nevadan lake left gravel-strewn mesas and wastes of drifting sand that, in a few instances, are marked by the blessed contrasts of oases. Yet, nature is prolific in her compensations. An acre of land in this semi-tropical climate will, when its almost insatiable thirst is quenched, yield three times as much produce as an acre in central or northern Utah. rthern Utah.

Those isolated mountains, or gigantic

Those isolated mountains, or gigantic buttes, are the sources from which Nevada is gleaning her wealth of gold. Their sun-scorched sides ever lure the prospector on to new or past-trodden fields of exploration. Wherever the limestone strata are upturned partial metamorphosis has taken place. Intrusive volcanic fires and lava, working up along the cleavage planes prove that the present climate is frigid when compared with that of the remote ages pared with that of the when nature was garnering those pre-cious atoms for which thousands of men are now jostling each other in the crowded boom camps, and for which hundreds are risking their lives in their almost frenzied search for new bonan-

#### Wealth in the Soil.

Aside from its gold, some alfalfa fruit, etc., the principal products of southern Nevada in the line of vegetation are mesquife, messerew, catclaw, about 100 varieties of cacti, including the harmless and dignified Joshua scrub live oak and the entire family of greasewoods, each and every one having thorns and briars to spare whenever the unwary tenderfoot forwards they ing thorns and briars to spare whenever the unwary tenderfoot forgets that nearly every form of vegetation here has its defensive armor. The unsolvable problem that ever vexes the prospector is why nature armed this desert vegetation with briars when almost the sum-total of animal life is composed of "rattlers," "sidewinders" and other venomous serpents, "gupchucks," horned toads, Gila monsters and other useless members of the lizard family; tarantulas, scorpions, every variety of fly known to man, "Wallapi tigers" and other venomous bugs, and the entire aggregation rounded off with the largest number and greatest variety of est number and greatest variety mosquitoes to be found on earth.

mosquitoes to be found on earth.

Add to the foregoing enumeration of indigenous products the fact that the only thermometer (not on ice or wearing a wet jacket) in this locality is registering 116 in the shade at 3 p. m., June 28, and he or she will have a faint conception of what existence means in southern Nevada.

#### Many Miles of Desert.

In order to connect the city of Zion with that of the Angels, it was inevitable that the lines of steel that mark the sinuous course of the San Pedro span a strip of desert nearly 200 miles wide, and through a country containing but few inhabitants. It required nerve as well as money to build a railroad through this country. It required supreme faith in the loyalty of the people of Los Angeles and Salt Lake, and in the mineral development of the region it was to traverse.

The rapid development of mineral in southern Nevada has justified the faith of the builders of the San Pedro, while the road has made possible the exploiting of fields that otherwise would not have been explored.

In the respective topography and geology of Utah and Nevada, and the striking dissimilarity, one discovers the

geology of Utah and Nevada, and the striking dissimilarity, one discovers the causes for the marked difference in the character and grade of the ore bodies of the respectable states.

In the massive ranges of Utah, with their great belts and dykes of granite, porphyry and other cruptive rocks, and the absence of explosive volcanic activity, one understands that the orebearing solutions would continue hot and fairly active over a great period of Mexican Mexican Mexican and states of the strength of the str and fairly active over a great period of time. Hence large low-grade ore bodies would be the result.

#### Differs Much From Utan.

The conditions in southern Nevada were different to those of Utah. Here the evidences of intense volcanic activ-ity are everywhere present. The orebearing solutions worked with marvelous intensity and rapidity. The golden
atoms were hurriedly collected and deposited. There was little time for the
gathering of the less soluble atoms of

Cc., 211 State street. Phone 162.

silica during the comparatively brief period in which the volcanic heat was maintained. The porous sediment, indicative of extinct hot springs and geysers, is found along the lines of faulting, near the bases and on the sides of the mountains, and furnish indubitable evidence of the widespread occurrence of ore-forming forces.

Such, in brief, are the conditions that are being encountered by prospectors. The surprising discoveries of gold during the past three or four years may never be surprassed, but the area over which rich mines will be discovered in southern Nevada will very likely prove to be the marvel of the age.

DULL MARKET FOR JUNE.

Close Was Lifeless With All Stocks Showing Weak.

The month closed dull on the local mining exchange, and the volume of business for June does not compare favorably with many previous months. The total figures for the month show 725.322 shares sold for \$137.522\$. The sales yesterday amounted to 16.100 shares, and they brought \$2.504.87\$. The morning session was especially quiet. More activity was experienced in the afternoon, but the business was done on a falling market, and little buoyancy was to be noticed in any of the stocks.

The light business yesterday was attributed to the fact that it was the end of the month and dealers were inclined to close the books to be ready for the opening next week. There will be but one session of the exchange today, that in the forenoon; and there will be no sessions at all on Monday or Tuesday, In this way the brokers will have what virtually amounts to a vacation. The figures for the day are as follows: | Forenoon, | Afternoon.

## **GOLD MOUNTAIN** HAS A STRIKE

Golden Treasure Mining Company Finds Rich Ore.

BIG DIVIDENDS ARE PAID

PRODUCERS KEEP UP THEIR EXCELLENT RECORD.

J. T. Breckon, president of the Golden Treasure Mining company, yesterday reported a strike in the tunnel of the company's property at Gold Mountain, south of Kimberly. Samples of the quartz brought in by Foreman G. H. Pidd were submitted to an assayer and proved to have values running to \$68.40 in gold and twenty-two ounces of silver. The vein was cut at the end of the 300-foot tunnel which the company silver. The vein was cut at the end of the 200-foot tunnel which the company has been driving since early last fall. The strike was made at a vertical depth of 150 feet. The company has been working quietly and persistently for almost a year, and President Breckon is now convinced that something absolutely good is in sight. The company has over 5,000 feet to run on the lead before reaching the confines of the twenty-one claaims included in the property of the Golden Treasure. As there are six parallel veins on the property, it is not possible to tell at this time what the development work will uncover. The company will drift on the vein and open it up as rapidly as possible. A contract for the work will be let Monday.

Speaking of the outlook, Mr. Breckon said that he had always been convinced that a great body of rich ore would some time be opened up on the property.

vinced that a great body of rich ore would some time be opened up on the property. He claims it to be the center of the whole Gold Mountain mineral belt. The vein encountered in the Golden Treasure intersects the veins of the Annie Laurie, the Trapper, the Sevier, the Signal Peak and Jim Long's Mammoth. The Golden Treasure is mear the opening of the crater to which all the veins in the district seem to converge. The company, Mr. Breckon says, has sufficient funds on hand to prosecute the work, and it will not be necessary to make assessment on the stock of the company.

OPEN THE CASH BOXES.

Goodly Sum in Dividends From Seven Utah Mines.

The mines of Utah shelled out \$320,500 The mines of Utah shelled out \$220,500 in dividends during the month of June. The Daly-West paid out \$198,000 to its stockholders; the Silver King distributed \$100,000 more for Fourth of July money; the Gemini of Tintic paid out the snug sum of \$50,000; the Grand Central let go of \$12,500 just to keep in practice, and the Uncle Sam Concontributed its mite of \$5,000. The Consolidated Mercur sent out, checks amount-

tributed its mite of \$5,000. The Consolidated Mercur sent out checks amounting to \$25,000.

Next month the Utah Consolidated company of Bingham will scatter \$600,-000, or \$2 a share, while the United States Mining company is expected to let go of 75 cents a share on its 486,000 shares, or \$364,500 in cash. These will be in addition to the ordinary dividends and will make of July one of the big dividend months of the year.

FIRST MILKMAID SHIPMENT.

Heavy Lead Ore Comes in From American Fork.

American Fork.

The first shipment of ore from the Milkmaid in American Fork canyon was made yesterday. A car of heavy lead ore was started from American Fork for the Taylor & Brunton sampler in this city, and it is expected that shipments will now be made regularly. The work on the property is being done under lease by Henry Schwan of Eureka.

The Milkmaid is owned by James Chipman and Dan Clift, of this city, and naturally these men are taking a deep interest in the developments. The indications are that a good body of ore has been encountered and that the mine is to be made a good producer.

Utah Stocks in Boston.

James A. Pollock & Co., bankers and brokers, yesterday received over their private wire from Paine. Webber & Co., one of their Boston correspondents, the record of sales of Utah stocks on the Boston market, with range and closing quotations.

Boston, June 20.—The market was very quiet, with no feature of special interest. One lot of 1,000 Copper Range was sold between 69 and 68½ with 85 bid for about 1,009 at the close. Tamarack was slightly stronger, with very small sales. Osceola also is very scarce and rallied easily. We advise buying the medium priced copper stocks every time they are weak. Quotations:

tations:

Sales, Op. High. Low. Close.

Ore and Bullion.

Ore and bullion settlements in this city yesterday, as reported by W. S. McCor-nick & Co., amounted to \$72,600. Of this amount \$33,900 was in ores and \$33,700 in

Metal Market.

Silver, 584c per ounce. Copper (casting), 14%c per pound. Lead, in orc, \$3.50; New York, \$4.50 per 9 pounds.

GOOD INCREASE FOR JUNE. Ore and Bullion Settlements Show Up

Well. The ore and bullion settlements reported for Salt Lake for the month of June show a nice increase over preceding menths. The total for the month is \$2,-394,399, compared with \$1,973,469 for May and \$2,102,500 for April. The increase was uniform throughout the month and the indications are for still heavier increases in the months to come.

Tintic Ore Shipments.

The ore shipments from the Tintic district for the week ending last night amounted to 122 cars, divided among the various mines as follows:
Eagle & Blue Bell 10
